

Safety Alert

Use this Alert: Discuss in Tool Box Talks and HSE Meetings → Distribute to contractors → Post on HSE Notice Boards → Include in site HSE Induction

What happened?

Three incidents occurred with the same type of crane (Hydra crane).

One of them caused a fatality in Ghala industrial area (not PDO).

Why it happened?

- Crane poor stability and
- Lack in safety features.

Lesson learned:

- Ensure all cranes are complying with international standards EN 7127-2-3 and EN 13000 or equivalent.
- Ensure all lifting equipment meet PDO procedure PR-1708/09 requirements.
- Ensure all lifting equipment is certified by approved lifting inspection agencies.

Recommendation:

- Hydra crane not to be used in all PDO area and its contractor's premises for PDO operations.

Lifting Equipment

Safety Alert

Mr. Musleh asks the questions of can it happen to you?

1. Do you make sure the equipment being used has been tested and is fit for use?
2. Do you make sure the equipment and attachments are secure and valid 3rd party certificates are in date?
3. Do you ensure that the lift plan and the risk assessment are in place?
4. Do you ensure the work area is clear before carrying out lifting operations?
5. Do you ensure that people are competent for the job?
